

Morning Brief

Date/Time Stamp: Sunday, Jun 23, 2019, 07:45

Northwest Activity Summary

Scattered precipitation occurred in Northern and Western Washington as well as Northwestern Oregon. No lightning recorded. Light initial attack. IMT2, NW Team 13 (Gales) has mobilized to Alaska.

Preparedness Levels

Northwest PL

Current	3-Day	10-Day	30-Day
1 (1/1)	1	1	2

National PL
2 (6/12)

Northwest Incident Activity

New Fires and Acres

9 fires for 30 acres
OR: 2 fires for 0 acres
WA: 7 fires for 30 acres

Large Fire Summary

New large incidents: 0
Reported incidents: 0 (OR: 0 WA: 0)
No growth on existing incidents

Northwest IMT Activity

NIMOs Committed: 0
Type 1 IMTs committed: 0
Type 2 IMTs committed: 0

National Fire Activity

Initial attack activity: Light (87) new fires
New large incidents: 1
Large fires contained: 0
Uncontained large fires: 8

National IMT Activity

Area Command Teams: 0
NIMOs committed: 0
Type 1 IMTs committed: 1
Type 2 IMTs committed: 3

Nationally, there are 17 large fires being managed under a strategy other than full suppression.

Northwest Current Incident Details

Incidents listed below meet large fire criteria and/or incidents with a Type 1 or 2 IMT assigned. Large incidents are defined as fires which are 100+ acres in timber or 300+ acres in grass/brush. For additional information on incidents no longer listed below please refer to the [NW Large Incident Summary](#) or [Northwest Fires Utilizing Monitor, Confine, Point Zone Protection Suppression Strategies \(YTD\)](#)

Incidents not Previously Reported: 0

Incidents Previously Reported: 0

Northwest Fire Weather Summary

Fire weather conditions are expected to remain near normal for late June across the geographic area. No unusual extremes of wind, temperature, or humidity are expected Sunday through Tuesday. Beginning Tuesday and Wednesday showers and thundershowers may become likely over Central and Eastern Oregon and Washington. This will bring some lightning fire starts but the cooling trend will work in the favor of initial attack. Monitor NWS fire weather planning forecasts for details.

Northwest Fire Potential Summary

Fire danger is expected to hold steady or decline for the next 10 days. The potential for large fires appears low in most areas due to lack of ignitions or very strong winds for the majority of the region. Lightning starts will become more likely on Tuesday and last through Friday as a deep upper level low pressure trough traverses the area. Even with lightning starts, the cool and moist conditions by then are expected to limit growth potential and work in the favor of initial attack next week. Occasional gusty winds in PSAs NW05 and NW10 could boost potential for human-caused fires mainly in light fuels.
